

InterBuss

Intercity Bus Tracking Application

Solution Scope & Value Proposition

Project	Platform	Version
InterBuss	Mobile (iOS & Android)	1.0 — Initial Release

1. Executive Summary

InterBuss is a mobile application developed for Interbuss that solves the lack of real-time information in intercity bus travel. The platform allows passengers to track bus lines live, purchase tickets, and receive timely updates about delays or estimated arrival times — all from their smartphone.

The solution addresses a critical gap in intercity transport: routes between cities such as Freire and Temuco currently operate with little to no publicly accessible real-time data, forcing passengers to call companies, arrive early at terminals, or simply guess when their bus will arrive.

2. Problem Statement

Intercity bus passengers in Chile face a persistent information gap that generates unnecessary stress, wasted time, and poor travel experiences. The core pain points identified are:

- No real-time visibility into whether a bus is on time, delayed, or already departed.
- Passengers are forced to arrive at terminals early to avoid missing their bus.
- Schedule information is scattered across multiple companies with no unified source.
- Purchasing tickets still depends heavily on on-site counters or phone calls.
- No standardized digital channel exists to communicate disruptions or changes.

These issues disproportionately affect daily commuters, students, and workers who rely on intercity buses as their primary means of transportation.

3. Solution Description

InterBuss is a unified mobile platform that consolidates route information, live tracking, and ticketing into a single intuitive experience. Built under the Interbuss brand, the app serves passengers traveling intercity routes in southern Chile.

3.1 Core Capabilities

Live Tracking	GPS-based real-time location of active bus lines, visible on an interactive map with estimated arrival times and next stop information.
Route Search	Search trips by origin and destination with results filterable by price, departure time, and operator. Direct comparison of available options in a single view.
In-App Ticketing	Purchase tickets digitally using debit cards or bank transfers. Tickets are delivered as QR codes, shareable and saveable directly from the app.
Trip Status Alerts	Visual status indicators (on time / delayed) shown per bus line with estimated delay information to help passengers plan their departure from home.
Bus Information	Detailed view of each assigned bus including company, patent number, route stops, and departure/arrival details.

4. Solution Scope

4.1 In Scope

The following functional areas are included in the v1.0 release:

Module	Description
Authentication	User registration and login with email and password.
Route Search	Search by origin/destination and date with filter and sort options.
Bus Tracking	Real-time map view of live buses with ETA and stop info.
Ticket Purchase	End-to-end ticket buying flow with multiple payment methods.

Module	Description
Digital Ticket	QR-based ticket display, sharing, and saving.
Bus Information	Detailed bus and route info per selected trip.
User Profile	Account management and trip history (Favorites).

4.2 Out of Scope

The following items are explicitly excluded from the v1.0 release:

- Multi-language support beyond Spanish.
- Admin panel or operator-side management dashboard.
- Credit card or international payment methods.
- Offline mode or cached route data.
- Integration with national transport authority APIs.
- Accessibility features beyond default OS support.

4.3 Target Users

User Segment	Profile
Daily Commuters	Workers and students making frequent trips on fixed intercity routes.
Occasional Travelers	Passengers who travel intercity infrequently and need guidance choosing trips.
Families & Groups	Users coordinating travel for multiple passengers.

5. Value Proposition

InterBuss creates value by directly addressing the mismatch between what intercity passengers need and what today's bus system provides.

5.1 Customer Jobs, Pains & Gains

Customer Jobs	Pains	Gains
Arrive at destination reliably	Not knowing if the bus is delayed	Know exact arrival time without calling

Customer Jobs	Pains	Gains
Know when to leave home	Waiting at terminal with no info	Manage time before heading out
Buy a ticket without going to terminal	Outdated or nonexistent schedule data	Purchase and receive tickets on phone
Choose among available bus lines	Relying on third parties to buy tickets	Compare options and pick the best one
Coordinate travel with others	Missing the bus due to inaccurate info	Feel in control of the entire journey

5.2 Feature-to-Benefit Mapping

Feature	User Benefit
Live GPS bus tracking	Eliminates uncertainty — passengers know exactly where the bus is.
Delay status alerts	Passengers can leave home at the right time, not an hour early.
In-app ticket purchase	No queues, no calls — full autonomy over the booking process.
QR digital ticket	Simple, shareable proof of purchase without printing anything.
Multi-line search with filters	Passengers pick the trip that best fits their time and budget.
Favorites & history	Frequent routes are one tap away — faster experience for regulars.

6. Assumptions & Constraints

6.1 Assumptions

- Bus companies provide or allow access to GPS data for their active fleet.
- Users have smartphones with active internet connectivity during travel.
- Payment providers (debit / bank transfer) are available and integrated via API.
- At least one intercity route (e.g. Freire – Temuco) is available for the pilot launch.

6.2 Constraints

- v1.0 covers a limited set of routes and operators — full network coverage is a future phase.
- Real-time accuracy depends on GPS device availability in each bus fleet.

- Regulatory compliance with Chilean transport authority data requirements must be confirmed.

7. Success Metrics

Metric	Target (3 months post-launch)
App downloads	1,000+ unique installs
Tickets purchased in-app	500+ transactions
Bus tracking sessions per day	200+ daily active tracking sessions
User satisfaction (app store)	4.0+ average rating
Average session duration	> 3 minutes per session
